EDUCATION

MSc Data Science & Artificial Intelligence, Université Côte d'Azur

2024 – 2026

BSc Mathematics & Computer Science, Université Côte d'Azur

2021 – 2024

HONORS & AWARDS

EFELIA Côte d'Azur Student Excellence Scholarship, Université Côte d'Azur

2025

EXPERIENCE

Research Intern

Apr 2026 – Present

INRIA, MAASAI Team, Sophia Antipolis, France

Supervised learning for morphometric reconstruction from partially observed data; supervised by Marco Corneli.

- Developing and evaluating missing-data reconstruction methods combining optimal transport and generative modelling (e.g. VAEs).
- Supporting archaeologists in their historical reconstruction work by recovering shapes from incomplete morphometric data.

Research Intern

Apr 2025 – Aug 2025

LJAD, Nice, France

Collaborative project with Eau d'Azur on predictive analytics for water distribution networks.

- Designed and implemented deep learning pipelines for time series imputation and forecasting.
- Conducted comparative evaluation of state-of-the-art imputation algorithms; proposed a hybrid method tailored to hydraulic network dynamics for Eau d'Azur.
- Implemented graph-theoretic models utilizing kernel ridge regression and graph Laplacians from a PhD thesis.
- Worked on a new regression algorithm enforcing Kirchhoff's law to ensure physical consistency across graph networks.

Data Scientist / Software Engineer

Oct 2023 – Sept 2024

VEV Services, Sophia Antipolis, France (Apprenticeship)

- Developed simulation and analytics frameworks for electric vehicle (EV) charging station networks using NestJS, Kafka, and Docker.
- Developed internal BI solutions for real-time data visualization using Power BI, integrating data from APIs and Azure PostgreSQL.
- Designed an Angular-based UI enabling simulation configuration and experimentation.
- Contributed to leveraging Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG) for internal data processing.

Research Intern

Apr 2023 – Jun 2023

I3S, Sophia Antipolis, France (Internship)

- Conducted a research internship within the SPARKS Team at I3S CNRS, focused on developing a framework for medical assistance through symptom prediction.
- Improved a raw web-scraped dataset from Symcat by cleaning, structuring, and optimizing it to create a usable database.
- Explored and analyzed current research in symptom prediction methodologies to identify potential improvements in database functionality, structure, and novel approaches for more accurate predictions.

TECHNICAL SKILLS

Programming Languages: Python, R, Java, JavaScript/TypeScript.

Data Science Stack: Pandas, NumPy, Pyplot, Scikit-learn, TensorFlow, PyTorch.

Frameworks & Tools: Github, Docker, Power BI, NoSQL/SQL Databases, Node.js/NestJS, Angular.

LANGUAGES

French, English, Spanish, German (learning), Fula & Wolof.
